ShaadiGo.com

Introduction

ShaadiGo is a comprehensive web-based platform designed to facilitate the management, booking, and coordination of wedding halls and related event services. The system aims to simplify the event planning process for customers while providing venue owners with an efficient tool to manage bookings, payments, communications, and operational activities.

Organizing weddings and large events often involves multiple stakeholders, time-sensitive decisions, and complex logistics. ShaadiGo centralizes these activities into a single platform where users can browse venues, check availability, make bookings, communicate with hall owners, and track their event status in real time.

The platform also provides analytical insights to venue managers, enabling them to monitor demand trends, manage cancellations and refunds, and optimize resource utilization during peak booking seasons. By integrating customer-facing services with administrative tools, ShaadiGo delivers a complete end-to-end solution for modern event management.

Functionalities

1. User Registration and Login

Customers and venue owners will be able to securely register and log in using valid credentials. Authentication mechanisms will ensure authorized access to personalized services.

2. Booking Cards Display

Available venues will be presented visually organized booking cards containing essential details such as capacity, location, pricing, and key features.

3. Image Gallery

Each venue listing will include a collection of high-quality images to help customers evaluate the facilities and ambiance before making a reservation.

4. Customer Booking Management

Registered users will be able to create, view, and manage their event bookings, including details such as date, venue, and booking status.

5. Refund Processing

The system will support refund requests for eligible cancellations, enabling transparent financial transactions between customers and venue owners.

6. High-Booking Statistics

Administrative users will have access to statistical reports identifying peak booking months and demand trends, supporting data-driven decision making.

7. Cancellation Management

Customers will be able to cancel bookings according to predefined policies, with automatic status updates reflected in the system.

8. In-Progress Event Tracking

Bookings that are confirmed and upcoming will be marked as “In Progress,” allowing both parties to monitor preparations and event timelines.

9. Real-Time Chat with Venue Owners

A built-in messaging system will enable direct communication between customers and hall owners for inquiries, negotiations, and coordination.

10. Contact and Support Module

Users will be able to submit inquiries, feedback, or complaints through a dedicated contact interface for administrative assistance.

11. Search and Filter System

Advanced filtering options will allow users to search venues based on criteria such as location, price range, capacity, and availability.

12. Availability Calendar

Each venue will feature a dynamic calendar displaying available and reserved dates, preventing scheduling conflicts and double bookings.

13. Online Payment and Advance Tracking

Customers will be able to make secure payments or deposits online, while the system tracks payment status, outstanding balances, and transaction history.

14. Reviews and Ratings

After events are completed, customers will be able to rate venues and provide feedback, helping future users make informed decisions and encouraging service quality improvements.
